## About This Manual

This reference guide describes all the peripherals available for TMS320x28xx and TMS320x28xxx devices. [Chapter 2](#) shows the peripherals used by each device. [Chapter 3](#) provides descriptions of the peripherals. You can download a document by clicking on the literature number, which is linked to the portable document format (pdf) file.

## Related Documentation from Texas Instruments

For a complete listing of related documentation and development-support tools for these devices, visit the Texas Instruments website at [www.ti.com](http://www.ti.com).

## Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

## Trademarks

TI E2E™, InstaSPIN™, InstaSPIN-FOC™, FAST™, InstaSPIN-MOTION™, C2000™, and controlSUITE™ are trademarks of Texas Instruments.

SpinTAC™ is a trademark of Linestream Technologies.

Arm® and Cortex® are registered trademarks of Arm Limited (or its subsidiaries).

EtherCAT® is a registered trademark of Beckhoff Automation GmbH.

Stellaris® is a registered trademark of Texas Instruments.

All trademarks are the property of their respective owners.

This page intentionally left blank.

Throughout this document and other peripheral guides, the following abbreviations are used for a series of 28x microcontrollers:

- **TMS320x28xx** refers to TMS320x281x and TMS320x280x devices.
- **TMS320x28xxx** refers to TMS320x2801x, TMS320x2802x, TMS320x2803x, TMS320x2804x, TMS320x2805x, TMS320x2806x, TMS320x2807x, TMS320x2823x, TMS320x2833x, TMS320x2834x, TMS320x2837xD, and TMS320x2837xS devices.
- **TMS320x28M3xx** refers to F28M35x and F28M36x devices.
- **TMS320F28004x** refers to F28004x devices.
- **TMS320F28003x** refers to F28003x devices.
- **TMS320F28002x** refers to F28002x devices.
- **TMS320F2838x** refers to F2838x devices.

Specific device abbreviations are listed in [Table 1-1](#).

**Table 1-1. Device Abbreviation Matrix**

Family	Device <sup>(1)</sup>	Device Abbreviation Used	Group Abbreviation
TMS320x280x	TMS320F2801, TMS320C2801, TMS320F2801-60	2801	280x
	TMS320F2802, TMS320C2802, TMS320F2802-60	2802	
	TMS320F2806, TMS320F2806	2806

	F28M36H33C	M36H33C	
	F28M36H33B	M36H33B	

(1) Where F precedes the device abbreviation, it stands for Flash memory; C stands for RAM.

This section lists the peripherals available for each of the 28xx, 28xxx devices. The literature number is a link to the document that can be downloaded.

## 2.1 TMS320x280x, TMS320x2801x Peripherals

Table 2-1 lists the peripherals available on the TMS320x280x and TMS320x2801x devices.

**Table 2-1. TMS320x280x, TMS320x2801x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	2809, 2808, 2806, 2802, 2801	28016	28015
System Control and Interrupts	<a href="#">SPRU712</a>	–	X	X	X
Boot ROM	<a href="#">SPRU722</a>	–	X	X	X
Analog-to-Digital Converter (ADC)	<a href="#">SPRU716</a>	1	X	X	X
Analog-to-Digital Converter Wrapper	<a href="#">SPRU716</a>	0	X	X	X
Serial Communications Interface (SCI)	<a href="#">SPRU7K7</a>	0	X	X	X
Serial Peripheral Interface (SPI)	<a href="#">SPRUG72</a>	0	X	X	X
Enhanced Controller Area Network (eCAN)	<a href="#">SPRUEU0</a>	0	X	X	–
Enhanced Quadrature Encoder Pulse (eQEP)	<a href="#">SPRU790</a>	0	X	–	–
Enhanced Pulse Width Modulator Module (ePWM)	<a href="#">SPRU791</a>	0	X	X	X
Enhanced Capture (eCAP) Module	<a href="#">SPRU807</a>	0	X	X	X
Inter-Integrated Circuit (I2C)	<a href="#">SPRU721</a>	0	X	X	X
High-Resolution Pulse-Width Modulator (HRPWM)	<a href="#">SPRU924</a>	0	X	X	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices which do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the peripheral reference guides.

## 2.2 TMS320x281x Peripherals

Table 2-2 lists the peripherals available on the TMS320x281x device.

**Table 2-2. TMS320x281x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	2812	2811, 2810
System Control and Interrupts	<a href="#">SPRU078</a>	–	X	X
Boot ROM	<a href="#">SPRU095</a>	–	X	X
Analog-to-Digital Converter (ADC)	<a href="#">SPRU060</a>	0	X	X
Analog-to-Digital Converter Wrapper	<a href="#">SPRU060</a>	0	X	X
External Interface (XINTF)	<a href="#">SPRU067</a>	0	X	–
Enhanced Controller Area Network (eCAN)	<a href="#">SPRU074</a>	0	X	X
Event Manager (EV)	<a href="#">SPRU065</a>	0	X	X
Multichannel Buffered Serial Port (McBSP)	<a href="#">SPRU061</a>	0	X	X
Serial Communications Interface (SCI)	<a href="#">SPRU051</a>	0	X	X
Serial Peripheral Interface (SPI)	<a href="#">SPRU059</a>	0	X	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices which do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the peripheral reference guides.

## 2.3 TMS320F2802x Peripherals

Table 2-3 lists the peripherals available on the TMS320F2802x device.

**Table 2-3. TMS320F2802x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28027, 28026, 28023, 28022	28021, 28020, 280200
System Control and Interrupts	SPRU109	–	X	X
Boot ROM		–	X	X
Analog-to-Digital Converter (ADC) <sup>(2)</sup>		3	X	X
Analog-to-Digital Converter Wrapper		1	X	X
Comparator Module (COMP)		0	X	X
Serial Communications Interface (SCI)		0	X	X
Serial Peripheral Interface (SPI)		1	X	X
Enhanced Pulse Width Modulator Module (ePWM)		1	X	X
Enhanced Capture Module (eCAP)		0	X	X
Inter-Integrated Circuit (I2C)		0	X	X
High-Resolution Pulse-Width Modulator (HRPWM)		1	X	–
InstaSPIN-FOC	SPRUHP4	–	X <sup>(3)</sup>	X <sup>(3)</sup>

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.
- (2) The ADC module is Type 3 and the Comparator module is Type 0.
- (3) InstaSPIN-FOC™ is available only on TMS320F2802xF devices.

## 2.4 TMS320F2803x Peripherals

Table 2-4 lists the peripherals available on the TMS320F2803x device.

**Table 2-4. TMS320F2803x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28035, 28033	28034, 28032	28031, 28030
System Control and Interrupts	SPRU110	–	X	X	X
Boot ROM		–	X	X	X
Analog-to-Digital Converter (ADC) <sup>(2)</sup>		3	X	X	X
Analog-to-Digital Converter Wrapper		1	X	X	X
Comparator Module (COMP)		0	X	X	X
Serial Communications Interface (SCI)		0	X	X	X
Serial Peripheral Interface (SPI)		1	X	X	X
Enhanced Controller Area Network (eCAN)		0	X	X	X
Enhanced Quadrature Encoder Pulse (eQEP)		0	X	X	X
Enhanced Pulse Width Modulator (ePWM)		1	X	X	X
Enhanced Capture Module (eCAP)		0	X	X	X
Inter-Integrated Circuit (I2C)		0	X	X	X
Local Interconnect Network (LIN)		0	X	X	X
High-Resolution Pulse-Width Modulator (HRPWM)		1	X	X	–
High-Resolution Capture (HRCAP)		0	X	X	–
Control Law Accelerator (CLA)		0	X	–	–

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.
- (2) The ADC module is Type 3 and the Comparator module is Type 0.

## 2.5 TMS320x2804x Peripherals

Table 2-5 lists the peripherals available on the TMS320x2804x device.

**Table 2-5. TMS320x2804x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28044
System Control and Interrupts	<a href="#">SPRU712</a>	–	X
Boot ROM	<a href="#">SPRU722</a>	–	X
Analog-to-Digital Converter (ADC)	<a href="#">SPRU716</a>	1	X
Analog-to-Digital Converter Wrapper	<a href="#">SPRU716</a>	0	X
Serial Communications Interface (SCI)	<a href="#">SPRU7K7</a>	0	X
Serial Peripheral Interface (SPI)	<a href="#">SPRU722</a>	0	X
Enhanced Pulse Width Modulator Module (ePWM)	<a href="#">SPRU791</a>	0	X
Inter-Integrated Circuit (I2C)	<a href="#">SPRU721</a>	0	X
High-Resolution Pulse-Width Modulator (HRPWM)	<a href="#">SPRU924</a>	0	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices which do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the peripheral reference guides.

## 2.6 TMS320F2805x Peripherals

Table 2-6 lists the peripherals available on the TMS320F2805x device.

**Table 2-6. TMS320F2805x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28055, 28054, 28053	28052, 28051, 28050
System Control and Interrupts	<a href="#">SPRUHE5</a>	–	X	X
Boot ROM		–	X	X
Analog-to-Digital Converter (ADC) <sup>(2)</sup>		3	X	X
Analog-to-Digital Converter Wrapper		1	X	X
Comparator Module (COMP)		1	X	X
Buffered Digital-to-Analog Converter (DAC)		0	X	X
Programmable Gain Amplifiers (PGA)		0	X	X
Serial Communications Interface (SCI)		0	X	X
Serial Peripheral Interface (SPI)		1	X	X
Enhanced Controller Area Network (eCAN)		0	X	X
Enhanced Quadrature Encoder Pulse (eQEP)		0	X	X
Enhanced Pulse Width Modulator (ePWM)		1	X	X
Enhanced Capture Module (eCAP)		0	X	X
Inter-Integrated Circuit (I2C)		0	X	X
Control Law Accelerator (CLA)		0	X	–
InstaSPIN-FOC	<a href="#">SPRUHW0</a>	–	X <sup>(3)</sup>	X <sup>(3)</sup>
InstaSPIN-MOTION	<a href="#">SPRUHW1</a>	–	X <sup>(4)</sup>	X <sup>(4)</sup>

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.
- (2) The ADC module is Type 3 and the Comparator module is Type 1.
- (3) InstaSPIN-FOC™ is available only on TMS320F2805xF and TMS320F2805xM devices.
- (4) InstaSPIN-MOTION™ is available only on TMS320F2805xM devices.

## 2.7 TMS320F2806x Peripherals

Table 2-7 lists the peripherals available on the TMS320F2806x device.

**Table 2-7. TMS320F2806x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28069, 28065	28068, 28064	28067, 28066, 28063, 28062
System Control and Interrupts	SPRUH18	–	X	X	X
Boot ROM		–	X	X	X
Analog-to-Digital Converter (ADC) <sup>(2)</sup>		3	X	X	X
Analog-to-Digital Converter Wrapper		1	X	X	X
Comparator Module (COMP)		0	X	X	X
Serial Communications Interface (SCI)		0	X	X	X
Serial Peripheral Interface (SPI)		1	X	X	X
Enhanced Controller Area Network (eCAN)		0	X	X	X
Enhanced Quadrature Encoder Pulse (eQEP)		0	X	X	X
Enhanced Pulse Width Modulator (ePWM)		1	X	X	X
Enhanced Capture Module (eCAP)		0	X	X	X
Inter-Integrated Circuit (I2C)		0	X	X	X
High-Resolution Capture (HRCAP)		0	X	X	X
High-Resolution Pulse-Width Modulator (HRPWM)		1	X	X	X
Control Law Accelerator (CLA)		0	X	–	–
Direct Memory Access (DMA)		0	X	X	X
Multichannel Buffered Serial Port (McBSP)		1	X	X	X
Universal Serial Bus (USB)		0	X <sup>(3)</sup>	X <sup>(3)</sup>	X <sup>(3)</sup>
InstaSPIN-FOC	SPRUH19	–	X <sup>(4)</sup>	X <sup>(4)</sup>	X <sup>(4)</sup>
InstaSPIN-MOTION	SPRUHJ0	–	X <sup>(5)</sup>	X <sup>(5)</sup>	X <sup>(5)</sup>
Floating-Point Unit (FPU)	SPRUHS1	–	X	X	X
Viterbi, Complex Math and CRC Unit (VCU)		1	X	X	–

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.
- (2) The ADC module is Type 3 and the Comparator module is Type 0.
- (3) USB is available only on TMS320F2806xU, TMS320F2806xF, and TMS320F2806xM devices.
- (4) InstaSPIN-FOC™ is available only on TMS320F2806xF and TMS320F2806xM devices.
- (5) InstaSPIN-MOTION™ is available only on TMS320F2806xM devices.

## 2.8 TMS320F2807x Peripherals

Table 2-8 lists the peripherals available on the TMS320F2807x device.

**Table 2-8. TMS320F2807x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28076	28075
System Control and Interrupts	SPRUHM9	–	X	X
ROM Code and Peripheral Booting		–	X	X
Analog-to-Digital Converter (ADC)		4	X	X
Analog-to-Digital Converter Wrapper		3	X	X
Direct Memory Access (DMA)		0	X	X
Control Law Accelerator (CLA)		1	X	X
General-Purpose Input /Output (GPIO)		–	X	X
Comparator Subsystem (CMPSS)		0	X	X
Configurable Logic Block (CLB)		1	X	–
Buffered Digital to Analog Converter (DAC)		1	X	X
Sigma Delta Filter Module (SDFM)		0	X	X
High-Resolution Pulse-Width Modulator (HRPWM)		4	X	X
Hardware Logic Self-Test Module (HWBIST)		0	X	X
Enhanced Capture Module (eCAP)		0	X	X
Enhanced Pulse Width Modulator (ePWM)		4	X	X
Enhanced Quadrature Encoder Pulse (eQEP)		0	X	X
Serial Peripheral Interface (SPI)		2	X	X
Serial Communications Interface (SCI)		0	X	X
Inter-Integrated Circuit (I2C)		0	X	X
Multichannel Buffered Serial Port (McBSP)		1	X	X
Controller Area Network (DCAN)		0	X	X
Universal Serial Bus (USB)		0	X	X
External Memory Interface (EMIF)		0	X	X
Trigonometric Math Unit (TMU)	SPRUHS1	0	X	X
Floating-Point Unit (FPU)		–	X	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in Chapter 3 and in the TRM.

## 2.9 TMS320F28002x Peripherals

Table 2-9 lists the peripherals available on the TMS320F28002x device.

**Table 2-9. TMS320F28002x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	280025C, 280024C, 280023C	280025, 280024, 280023, 280022, 280021
System Control and Interrupts	SPRUIN7	–	X	X
ROM Code and Peripheral Booting		–	X	X
Dual-Clock Comparator (DCC)		2	X	X
Analog-to-Digital Converter (ADC)		5	X	X
Analog-to-Digital Converter Wrapper		3	X	X
Direct Memory Access (DMA)		0	X	X
General-Purpose Input/Output (GPIO)		–	X	X
Temperature Sensor		–	X	X
Comparator Subsystem (CMPSS)		1	X	X
Configurable Logic Block (CLB)		3	X	–
Enhanced Pulse Width Modulator (ePWM)		4	X	X
Enhanced Capture Module (eCAP)		2	X	X
Enhanced Quadrature Encoder Pulse (eQEP)		2	X	X
High-Resolution Capture Module (HRCAP)		2	X	X
High-Resolution Pulse-Width Modulator (HRPWM)		4	X	X
Serial Peripheral Interface (SPI)		2	X	X
Serial Communications Interface (SCI)		0	X	X
Inter-Integrated Circuit (I2C)		1	X	X
Local Interconnect Network (LIN)		1	X	X
Fast Serial Interface (FSI)		1	X	X
Power Management Bust Module (PMBus)		0	X	X
Host Interface Controller (HIC)		1	X	X
Background CRC-32 (BGCRC)		0	X	X
Controller Area Network (DCAN)		0	X	X
HWBIST		0	X	X
MPOST		0	X	X
Embedded Real-time Analysis and Diagnostic (ERAD)		1	X	X
Trigonometric Math Unit (TMU)	SPRUHS1	1	X	X
Cyclic Redundancy Check (VCRC)		–	X	X
Floating-Point Unit (FPU)		–	X	X
Motor Control libraries in ROM	SPRUJ26	–	X <sup>(2)</sup>	–

(1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.

(2) Motor Control libraries in ROM is available only on TMS320F28002xC devices.

## 2.10 TMS320F28003x Peripherals

Table 2-10 lists the peripherals available on the TMS320F28003x device.

**Table 2-10. TMS320F28003x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	280039C,280038C,280037C,280036C	280039,280038,280037,280036,280034	280033
System Control and Interrupts	SPRUW9	—	X	X	X
ROM Code and Peripheral Booting		—	X	X	X
Dual-Clock Comparator (DCC)		2	X	X	X
Analog-to-Digital Converter (ADC)		5	X	X	X
Analog-to-Digital Converter Wrapper		3	X	X	X
Advance Encryption Standard (AES) Accelerator		—	X	X	X
Direct Memory Access (DMA)		0	X	X	X
General-Purpose Input/Output (GPIO)		—	X	X	X
Temperature Sensor		—	X	X	X
Comparator Subsystem (CMPSS)		2	X	X	X
Configurable Logic Block (CLB)		3	X	—	—
Dual-Clock Comparator (DCC)		—	X	X	X
Enhanced Pulse Width Modulator (ePWM)		4	X	X	X
Enhanced Capture Module (eCAP)		2	X	X	X
Enhanced Quadrature Encoder Pulse (eQEP)		2	X	X	X
High-Resolution Capture Module (HRCAP)		2	X	X	X
High-Resolution Pulse-Width Modulator (HRPWM)		4	X	X	X
Serial Peripheral Interface (SPI)		2	X	X	X
Serial Communications Interface (SCI)		0	X	X	X
Inter-Integrated Circuit (I2C)		1	X	X	X
Local Interconnect Network (LIN)		1	X	X	X
Fast Serial Interface (FSI)		2	X	X	X
Power Management Bust Module (PMBus)		0	X	X	X
Host Interface Controller (HIC)		1	X	X	X
Background CRC-32 (BGCRC)		0	X	X	X
Controller Area Network (DCAN)		0	X	X	X
Embedded Real-time Analysis and Diagnostic (ERAD)		1	X	X	X
Control Law Accelerator (CLA)		2	X	X	—
Hardware Logic Self-Test Module (HWBIST)		0	X	X	X
Memory Power On Self Test (MPOST)		0	X	X	X
Buffered Digital-to-Analog Converter (DAC)		2	X	X	X
Sigma Delta Filter Module (SDFM)		2	X	X	X
Modular Controller Area Network (MCAN)		1	X	X	X
Embedded Pattern Generator (EPG)		0	X	X	X
Trigonometric Math Unit (TMU)	SPRUH5	1	X	X	X
Cyclic Redundancy Check (VCRC)		—	X	X	X
Floating-Point Unit (FPU)		—	X	X	X

**Table 2-10. TMS320F28003x Peripheral Selection Guide (continued)**

Peripheral	Lit. No.	Type <sup>(1)</sup>	280039C,280038C,280037C,280036C	280039,280038,280037,280036,280034	280033
Motor Control libraries in ROM		–	X <sup>(2)</sup>	–	–

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.
- (2) Motor Control libraries in ROM is available only on TMS320F28003xC devices.

## 2.11 TMS320F28004x Peripherals

Table 2-11 lists the peripherals available on the TMS320F28004x device.

**Table 2-11. TMS320F28004x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	280049C, 280049, 280048C, 280048, 280045, 280041C, 280041, 280040C, 280040
System Control and Interrupts	SPRUI33	–	X
ROM Code and Peripheral Booting		–	X
Dual-Clock Comparator (DCC)		1	X
Analog-to-Digital Converter (ADC)		5	X
Analog-to-Digital Converter Wrapper		3	X
Direct Memory Access (DMA)		0	X
Control Law Accelerator (CLA)		2	X
Configurable Logic Block (CLB)		2	X <sup>(2)</sup>
General-Purpose Input/Output (GPIO)		–	X
Temperature Sensor		–	X
Comparator Subsystem (CMPSS)		1	X
Buffered Digital to Analog Converter (DAC)		2	X
Programmable Gain Amplifier (PGA)		1	X
Sigma Delta Filter Module (SDFM)		1	X
Enhanced Pulse Width Modulator (ePWM)		4	X
Enhanced Capture Module (eCAP)		1	X
Enhanced Quadrature Encoder Pulse (eQEP)		1	X
High-Resolution Pulse-Width Modulator (HRPWM)		4	X
High-Resolution Capture Module (HRCAP)		1	X
Serial Peripheral Interface (SPI)		2	X
Serial Communications Interface (SCI)		0	X
Inter-Integrated Circuit (I2C)		1	X
Local Interconnect Network (LIN)		1	X
Fast Serial Interface (FSI)		0	X
Power Management Bust Module (PMBus)		0	X
CLA Program ROM CRC (CLAPROMCRC)		0	X
Controller Area Network (DCAN)		0	X
Embedded Real-time Analysis and Diagnostic (ERAD)		0	X
Trigonometric Math Unit (TMU)	SPRUHS1	0	X
Viterbi, Complex Math, and CRC Unit (VCU-I)		1	X
Floating-Point Unit (FPU)		–	X
InstaSPIN-FOC	SPRUHJ1	–	X <sup>(3)</sup>

(1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in Chapter 3 and in the TRM.

(2) Configurable Logic Block (CLB) is available only on TMS320F28004xC devices.

(3) InstaSPIN-FOC™ is available only on TMS320F28004xC devices.

## 2.12 TMS320F2823x Peripherals

[Table 2-12](#) lists the peripherals available on the TMS320F2823x device.

**Table 2-12. TMS320F2823x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28235, 28234, 28232
System Control and Interrupts	SPRUI07	–	X
Boot ROM		–	X
Analog-to-Digital Converter (ADC)		2	X
Analog-to-Digital Converter Wrapper		0	X
Multichannel Buffered Serial Port (McBSP)		1	X
Serial Communications Interface (SCI)		0	X
Serial Peripheral Interface (SPI)		0	X
Enhanced Controller Area Network (eCAN)		0	X
Enhanced Quadrature Encoder Pulse (eQEP)		0	X
Enhanced Pulse Width Modulator Module (ePWM)		0	X
Enhanced Capture Module (eCAP)		0	X
Inter-Integrated Circuit (I2C)		0	X
High-Resolution Pulse-Width Modulator (HRPWM)		0	X
Direct Memory Access (DMA)		0	X
External Interface (XINTF)		1	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices which do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.

## 2.13 TMS320F2833x Peripherals

Table 2-13 lists the peripherals available on the TMS320F2833x device.

**Table 2-13. TMS320F2833x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28335, 28334, 28333, 28332
System Control and Interrupts	SPRUI07	–	X
Boot ROM		–	X
Analog-to-Digital Converter (ADC)		2	X
Analog-to-Digital Converter Wrapper		0	X
Multichannel Buffered Serial Port (McBSP)		1	X
Serial Communications Interface (SCI)		0	X
Serial Peripheral Interface (SPI)		0	X
Enhanced Controller Area Network (eCAN)		0	X
Enhanced Quadrature Encoder Pulse (eQEP)		0	X
Enhanced Pulse Width Modulator Module (ePWM)		0	X
Enhanced Capture Module (eCAP)		0	X
Inter-Integrated Circuit (I2C)		0	X
High-Resolution Pulse-Width Modulator (HRPWM)		0	X
Direct Memory Access (DMA)		0	X
External Interface (XINTF)		1	X
Floating-Point Unit (FPU)	SPRUHS1	–	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices which do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.

## 2.14 TMS320x2834x Peripherals

[Table 2-14](#) lists the peripherals available on the TMS320x2834x device.

**Table 2-14. TMS320x2834x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28346, 28345, 28344, 28343, 28342, 28341
System Control and Interrupts	<a href="#">SPRUFN1</a>	—	X
Boot ROM	<a href="#">SPRUFN5</a>	—	X
Multichannel Buffered Serial Port (McBSP)	<a href="#">SPRUG80</a>	1	X
Serial Communications Interface (SCI)	<a href="#">SPRUG75</a>	0	X
Serial Peripheral Interface (SPI)	<a href="#">SPRUG73</a>	0	X
Enhanced Controller Area Network (eCAN)	<a href="#">SPRUEU4</a>	0	X
Enhanced Quadrature Encoder Pulse (eQEP)	<a href="#">SPRUG74</a>	0	X
Enhanced Pulse Width Modulator Module (ePWM)	<a href="#">SPRUZF6</a>	0	X
Enhanced Capture Module (eCAP)	<a href="#">SPRUG79</a>	0	X
Inter-Integrated Circuit (I2C)	<a href="#">SPRUG76</a>	0	X
High-Resolution Pulse-Width Modulator (HRPWM)	<a href="#">SPRUG77</a>	0	X
Direct Memory Access (DMA)	<a href="#">SPRUG78</a>	0	X
External Interface (XINTF)	<a href="#">SPRUFN4</a>	1	X
Floating-Point Unit (FPU)	<a href="#">SPRUHS1</a>	—	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the peripheral reference guide.

## 2.15 TMS320F2837xD Peripherals

Table 2-15 lists the peripherals available on the TMS320F2837xD device.

**Table 2-15. TMS320F2837xD Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28379D, 28377D, 28376D, 28375D, 28374D
System Control and Interrupts	SPRUHM8	–	X
ROM Code and Peripheral Booting		–	X
Analog-to-Digital Converter (ADC)		4	X
Analog-to-Digital Converter Wrapper		3	X
Temperature Sensor		–	X
Direct Memory Access (DMA)		0	X
Control Law Accelerator (CLA)		1	X
Configurable Logic Block (CLB)		1	X
Inter-processor Communication (IPC)		–	X
General-Purpose Input/Output (GPIO)		–	X
Comparator Subsystem (CMPSS)		0	X
Buffered Digital to Analog Converter (DAC)		1	X
Sigma Delta Filter Module (SDFM)		0	X
High-Resolution Pulse-Width Modulator (HRPWM)		4	X
Hardware Logic Self-Test Module (HWBIST)		0	X
Enhanced Pulse Width Modulator (ePWM)		4	X
Enhanced Capture Module (eCAP)		0	X
Enhanced Quadrature Encoder Pulse (eQEP)		0	X
Serial Peripheral Interface (SPI)		2	X
Serial Communications Interface (SCI)		0	X
Inter-Integrated Circuit (I2C)		0	X
Multichannel Buffered Serial Port (McBSP)		1	X
Controller Area Network (DCAN)		0	X
Universal Serial Bus (USB)		0	X
Universal Parallel Port (uPP)		0	X
External Memory Interface (EMIF)		0	X
Trigonometric Math Unit (TMU)	SPRUHS1	0	X
Viterbi, Complex Math, and CRC Unit (VCU-II)		2	X
Floating-Point Unit (FPU)		–	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices which do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.

## 2.16 TMS320F2837xS Peripherals

Table 2-16 lists the peripherals available on the TMS320F2837xS device.

**Table 2-16. TMS320F2837xS Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28379S, 28377S, 28376S, 28375S, 28374S
System Control and Interrupts	SPRUHX5	–	X
ROM Code and Peripheral Booting		–	X
Analog-to-Digital Converter (ADC)		4	X
Analog-to-Digital Converter Wrapper		3	X
Temperature Sensor		–	X

Power Management Bus (PMBus)		0	X	X	X	X

**Table 2-17. TMS320F2838x Peripheral Selection Guide (continued)**

Peripheral	Lit. No.	Type <sup>(1)</sup>	28388D, 28388S	28386D, 28386S	28384D, 28384S
Trigonometric Math Unit (TMU)	SPRUHS1	0	X	X	X
Cyclic Redundancy Check (VCRC)		–	X	X	X
Floating-Point Unit (FPU32 and FPU64)		–	X	X	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices which do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.

## 2.18 TMS320F28M35x Peripherals

[Table 2-18](#) lists the peripherals available on the TMS320F28M35x device.

**Table 2-18. TMS320F28M35x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)</sup>	M35xx2C	M35xx0B
System Control and Interrupts	SPRUH22	–	X	X
Boot ROM		–	X	X
Analog-to-Digital Converter (ADC) <sup>(2)</sup>		3	X	X
Analog-to-Digital Converter Wrapper		2	X	X
Comparator Module (COMP)		0	X	X
External Peripheral Interface (EPI)		0	X	X
Hardware Logic Self-Test Module (HWBIST)		0	X	X
<b>Master Subsystem - Arm® Cortex®-M3 Peripherals</b>				
Ethernet Media Access Controller (EMAC)		0	X	–
Synchronous Serial Interface (SSI)		0	X	X
Controller Area Network (DCAN)		0	X	X
Universal Serial Bus (USB)		0	X	-
M3 Inter-Integrated Circuit (I2C)		0	X	X
Universal Asynchronous Receiver/Transmitter (UART)		0	X	X
Micro Cyclic Redundancy Check Module (μCRC)		0	X	X
Direct Memory Access (μDMA)		0	X	X
<b>Control Subsystem - TI C28x Peripherals</b>				
Serial Communications Interface (SCI)	0	X	X	
Enhanced Quadrature Encoder Pulse (eQEP)	0	X	X	
Enhanced Pulse-Width Modulator (ePWM)	2	X	X	
High-Resolution Pulse-Width Modulator (HRPWM)	2	X	X	
Enhanced Capture Module (eCAP)	0	X	X	
Inter-Integrated Circuit (I2C)	0	X	X	
Direct Memory Access Module (DMA)	0	X	X	
Multichannel Buffered Serial Port (McBSP)	1	X	X	
Serial Peripheral Interface (SPI)	0	X	X	
Viterbi, Complex Math and CRC Unit (VCU)	SPRUHS1	0	X	X
Floating-Point Unit (FPU)		–	X	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.
- (2) The ADC module is Type 3 and the Comparator module is Type 0.

## 2.19 TMS320F28M36x Peripherals

Table 2-19 lists the peripherals available on the TMS320F28M36x device.

**Table 2-19. TMS320F28M36x Peripheral Selection Guide**

Peripheral	Lit. No.	Type <sup>(1)*</sup>	M36xxxC	M36xxxB
System Control and Interrupts	SPRUHE8	–	X	X
Boot ROM		–	X	X
Analog-to-Digital Converter (ADC) <sup>(2)</sup>		3	X	X
Analog-to-Digital Converter Wrapper		2	X	X
Comparator Module (COMP)		0	X	X
External Peripheral Interface (EPI) <sup>(3)</sup>		0	X	X
Hardware Logic Self-Test Module (HWBIST)		0	X	X
Master Subsystem - Arm® Cortex®-M3 Peripherals				
Ethernet Media Access Controller (EMAC)		0	X	–
Synchronous Serial Interface (SSI)		0	X	X
Controller Area Network (DCAN)		0	X	X
Universal Serial Bus (USB)		0	X	–
M3 Inter-Integrated Circuit (I2C)		0	X	X
Universal Asynchronous Receiver/Transmitter (UART)		0	X	X
Micro Cyclic Redundancy Check Module (μCRC)		0	X	X
Direct Memory Access (μDMA)		0	X	X
Control Subsystem - TI C28x Peripherals				
Serial Communications Interface (SCI)		0	X	X
Enhanced Quadrature Encoder Pulse (eQEP)		0	X	X
Enhanced Pulse Width Modulator (ePWM)		2	X	X
High-Resolution Pulse-Width Modulator (HRPWM)		2	X	X
Enhanced Capture Module (eCAP)		0	X	X
Inter-Integrated Circuit (I2C)		0	X	X
Direct Memory Access (DMA)		0	X	X
Multichannel Buffered Serial Port (McBSP)		1	X	X
Serial Peripheral Interface (SPI)		0	X	X
Viterbi, Complex Math and CRC Unit (VCU)	SPRUHS1	0	X	X
Floating-Point Unit (FPU)		–	X	X

- (1) A type change represents a major functional feature difference in a peripheral module. Within a peripheral type, there may be minor differences between devices that do not affect the basic functionality of the module. These device-specific differences are listed in [Chapter 3](#) and in the TRM.
- (2) The ADC module is Type 3 and the Comparator module is Type 0.
- (3) The EPI module is controlled by either CPU. Refer to the relevant section of [SPRUHE8](#) for more information.

Brief descriptions of the peripherals are included in the following sections.

<b>3.1 Coprocessor and C28x Extended Instruction Sets.....</b>	<b>30</b>
<b>3.2 System Peripherals.....</b>	<b>33</b>
<b>3.3 Control Peripherals.....</b>	<b>39</b>
<b>3.4 Communication Peripherals.....</b>	<b>49</b>

## 3.1 Coprocessor and C28x Extended Instruction Sets

### 3.1.1 Control Law Accelerator (CLA) Module

The C28x Control Law Accelerator (CLA) module is an independent, fully-programmable, 32-bit floating-point math processor that brings concurrent control-loop execution to the C28x family. The low interrupt-latency of the CLA allows it to read ADC samples "just-in-time." This significantly reduces the ADC sample to output delay to enable faster system response and higher MHz control loops. By using the CLA to service time-critical control loops, the main CPU is free to perform other system tasks such as communications and diagnostics.

Refer to the device-specific technical reference manual for more information.

[Table 3-1](#) lists the CLA types, including device-specific differences within each type.

**Table 3-1. Control Law Accelerator (CLA) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original CLA Module Type	2803x	Only supports data RAM0 and 1 and does not allow CPU access when CLA data RAM is enabled.
		2805x, 2806x	Adds supports for data RAM2 and adds option to enable CPU access to data RAMs.
1	Increased Program address reachability to 16-bits; added instructions to support the new address reach; added two new offset addressing modes; CLA program memory is now user selectable and can reside anywhere in the lower 64k address space (excluding the M0 and M1 space). The job of giving control to the CLA and assigning triggers to a task is now done at the system level; a task can now fire an interrupt to main CPU mid execution.	2807x, 2837xD, 2837xS	—
2	Added Background-code mode, that can run task like communications and clean-up routines in Background; Background tasks runs continuously until disable or device/soft reset; Background task can be triggered by a peripheral or software; other foreground tasks can interrupt background task in the priority order defined; added provision for making sections of background code uninterruptible; added debug enhancements which has true software breakpoint support, where CLA re-fetches from the same address where halted during debug stop.	28003x, 28004x, 2838x	—

### 3.1.2 Floating-Point Unit (FPU)

The C28x plus floating-point (C28x+FPU) processor extends the capabilities of the C28x fixed-point CPU by adding registers and instructions to support IEEE single-precision floating point operations. Devices with the C28x+FPU include the standard C28x register set plus an additional set of floating-point unit registers. The additional floating-point unit registers are the following:

- Eight floating-point result registers, RnH (where n = 0–7)
- Floating-point Status Register (STF)
- Repeat Block Register (RB)

All of the floating-point registers, except the repeat block register, are shadowed. This shadowing can be used in high-priority interrupts for fast context save and restore of the floating-point registers.

For more information, see the [TMS320C28x Extended Instruction Sets Technical Reference Manual](#).

[Table 3-2](#) lists the FPU types, including device-specific differences within each type.

**Table 3-2. Floating-Point Unit (FPU) Type Description**

Type	Description	Devices Covered	Device-Specific Options
–	Original FPU Instruction Set	2806x, 2807x, 28004x, 2833x, 2834x, 2837xD, 2837xS, M35x, M36x	–
		28002x, 28003x	New instructions for Fast Integer Division.
		2838x	Additional double precision float instruction set (FPU64). New instructions for Fast Integer Division.

### 3.1.3 Viterbi, Complex Math, and CRC Unit (VCU)

The C28x Viterbi, Complex Math and CRC Unit (VCU) is a fully-programmable block that accelerates the performance of communications-based algorithms by up to a factor of 8× over the C28x CPU alone. In addition to eliminating the need for a second processor to manage the communications link, the performance gains of the VCU provides headroom for future system growth and higher bit rates or, conversely, enables devices to operate at a lower MHz to reduce system cost and power consumption.

For more information, see the [TMS320C28x Extended Instruction Sets Technical Reference Manual](#).

[Table 3-3](#) lists the VCU types, including device-specific differences within each type.

**Table 3-3. Viterbi, Complex Math, and CRC Unit (VCU) Type Description**

Type	Description	Devices Covered	Device-Specific Options
0/1	Original VCU Module Type (both types are equivalent)	2806x, 28004x, M35x, M36x	–
2	Added instructions to improve performance in Viterbi decoding, complex arithmetic instructions, complex FFT, AES encryption and decryption. Added instructions for direct register access between VCU and C28x. Added Interrupt to PIE.	2837xD, 2837xS	–

### 3.1.4 Cyclic Redundancy Check (VCRC) Module

The C28x with VCRC (C28x+VCRC) processor extends the capabilities of the C28x CPU by adding registers and instructions to support CRC. CRC algorithms provide a straightforward method for verifying data integrity over large data blocks, communication packets, or code sections. The C28x+VCRC can perform 8-, 16-, 24-, and 32-bit CRCs.

For more information, see the [TMS320C28x Extended Instruction Sets Technical Reference Manual](#).

[Table 3-4](#) lists the VCRC types, including device-specific differences within each type.

**Table 3-4. Cyclic Redundancy Check (VCRC) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
–	Original VCRC Module Type	28002x, 28003x, 2838x	–

### 3.1.5 Trigonometric Math Unit (TMU)

The Trigonometric Math Unit (TMU) is an accelerator that extends the capabilities of the C28x+FPU, specifically designed to speed up the execution of common trigonometric and arithmetic operations.

For more information, see the [TMS320C28x Extended Instruction Sets Technical Reference Manual](#).

[Table 3-5](#) lists the TMU types, including device-specific differences within each type.

**Table 3-5. Trigonometric Math Unit (TMU) Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original TMU Module Type	2807x, 28004x, 2837xD, 2837xS, 2838x	–
1	Added new instructions supporting NLPID	28002x, 28003x	–

## 3.2 System Peripherals

The following sections describe the system peripherals.

### 3.2.1 Advance Encryption Standard (AES) Accelerator Module

The Advance Encryption Standard (AES) Accelerator module provides hardware-accelerated data encryption and decryption operations based on a binary key. The AES is a symmetric cipher module that supports a 128-, 192-, or 256-bit key in hardware for encryption and decryption. The AES module is based on a symmetric algorithm, which means that the encryption and decryption keys are identical. To encrypt data means to convert it from plain text to an unintelligible form called cipher text. Decrypting cipher text converts previously encrypted data to its original plain text form.

Refer to the device-specific technical reference manual for more information.

[Table 3-6](#) lists the AES accelerator module types, including device-specific differences within each type.

**Table 3-6. Advance Encryption Standard (AES) Accelerator Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original AES Accelerator Module Type	28003x, 2838x	–

### 3.2.2 Background CRC-32 (BGCR) Module

The Background CRC (BGCR) module computes a CRC-32 on a configurable block of memory. It accomplishes this by fetching the specified block of memory during idle cycles (when the CPU, CLA, or DMA is not accessing the memory block). The calculated CRC-32 value is compared against a golden CRC-32 value to indicate a pass or fail. In essence, the BGCR helps identify memory faults and corruption.

Refer to the device-specific technical reference manual for more information.

[Table 3-7](#) lists the BGCR types, including device-specific differences within each type.

**Table 3-7. Background CRC-32 (BGCR) Module Type Description**

Type	Description	Devices Covered	Device- Specific Options
0	Original BGCR Module Type	28002x, 28003x, 28004x, 2838x	–

### 3.2.3 Boot ROM

The boot ROM is factory-programmable with bootloading software. Boot-mode signals (general-purpose I/Os) are used to tell the bootloader software which mode to use. The Boot ROM also contains standard math tables such as SIN/COS for use in IQ math related algorithms.

The device-specific Boot ROM guides are:

- [TMS320x281x Boot ROM Reference Guide](#)
- [TMS320x280x, 2801x, 2804x DSP Boot ROM Reference Guide](#)
- [TMS320x2834x Boot ROM Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

### 3.2.4 Direct Memory Access (DMA) Module

The Direct Memory Access (DMA) module provides a hardware method of transferring data between peripherals and/or memory without intervention from the CPU, thereby freeing up bandwidth for other system functions. Additionally, the DMA has the capability to orthogonally rearrange the data as it is transferred as well as “ping-pong” data between buffers. These features are useful for structuring data into blocks for optimal CPU processing.

The device-specific DMA guide is:

- [TMS320x2834x Direct Memory Access \(DMA\) Module Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-8](#) lists the DMA types, including device-specific differences within each type.

**Table 3-8. Direct Memory Access (DMA) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original DMA Module Type	2834x	DMA does not interface to ePWM.
		2823x, 2833x, M35x, M36x	Added interface to ADC and ePWM.
		2806x	Added interface to USB.
		2807x, 28002x, 28003x, 28004x, 2837xD, 2837xS, 2838x	Added interface to SPI and SDFM. Modified Peripheral Interrupt Event Trigger configuration registers.

### 3.2.5 Dual-Clock Comparator (DCC)

The dual-clock comparator module is used for evaluating and monitoring the clock input based on a second clock, which can be a more accurate and reliable version. This instrumentation is used to detect faults in clock source or clock structures, thereby enhancing the system's safety metrics.

Refer to the device-specific technical reference manual for more information.

[Table 3-9](#) lists the DCC types, including device specific differences within each type.

**Table 3-9. Dual-Clock Comparator (DCC) Type Description**

Type	Description	Devices Covered	Device-Specific Options
1	Original DCC Module Type	28004x	–
2	Added 4-bit key to enable writes to DCC Clock Source0. Added more configuration options for clock sources to Counter0 and Counter1	28002x, 28003x, 28006x, 2838x	–

### 3.2.6 Embedded Pattern Generator (EPG) Module

The Embedded Pattern Generator (EPG) module is a customizable pattern and clock generator that could serve many test and application scenarios that require a simple pattern generator or a periodic clock generator. The EPG module can also be used to capture an incoming serial stream of data.

Refer to the device-specific technical reference manual for more information.

[Table 3-10](#) lists the EPG types, including device-specific differences within each type.

**Table 3-10. Embedded Pattern Generator (EPG) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original EPG Module Type	28003x	–

### 3.2.7 Embedded Real-time Analysis and Diagnostic (ERAD) Module

The Embedded Real-time Analysis and Diagnostic (ERAD) module enhances the debug and system-analysis capabilities of the device. The debug and system-analysis enhancements provided by the ERAD module is done outside of the CPU. The ERAD module is accessible by the debugger and by the application software, which significantly increases the debug capabilities of many real-time systems, especially in situations where debuggers are not connected.

Refer to the device-specific technical reference manual for more information.

[Table 3-11](#) lists the ERAD types, including device-specific differences within each type.

**Table 3-11. Embedded Real-time Analysis and Diagnostic (ERAD) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original ERAD Module Type	28004x	–
1	Addition of CRC block. Addition of EVENT masking and exporting feature.	28002x, 28003x, 2838x	–

### 3.2.8 External Memory Interface (EMIF)

The External Memory Interface (EMIF) is a data port that provides ease and flexibility when connecting to a variety of external devices including SDR SDRAM and asynchronous devices. EMIF is compliant with JESD21-C memories utilizing 32-bit or 16-bit data buses.

Refer to the device-specific technical reference manual for more information.

[Table 3-12](#) lists the EMIF types, including device specific differences within each type.

**Table 3-12. External Memory Interface (EMIF) Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original EMIF Module Type	2807x, 2837xD, 2837xS	–
		2838x	With optional re-mapping of SDRAM in lower 22 bits address range of memory.

### 3.2.9 External Peripheral Interface (EPI)

The External Peripheral Interface (EPI) is a high-speed parallel interface to external peripherals or memories. The EPI supports  $\mu$ DMA access, clocking control, 8/16/32 bit dedicated parallel bus, blocking and non-blocking reads, and three functional modes: Synchronous Dynamic Random Access Memory (SDRAM), Host-bus, and General Purpose.

Refer to the device-specific technical reference manual for more information.

[Table 3-13](#) lists the EPI types, including device-specific differences within each type.

**Table 3-13. External Peripheral Interface (EPI) Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original EPI Module Type	M35x, M36x	–

### 3.2.10 Event Manager (EV) Module

The Event Manager (EV) module includes general-purpose timers, full-compare/pulse-width modulation (PWM) units, capture inputs (CAP) and quadrature-encoder pulse (QEP) circuits. Two such event managers are provided, which enable two three-phase motors to be driven or four two-phase motors. The event managers on the F281x are compatible to the event managers on the 240x devices (with some minor enhancements).

The device-specific EV guide is:

- [TMS320x281x DSP Event Manager \(EV\) Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-14](#) lists the EV types, including device-specific differences within each type.

**Table 3-14. Event Manager (EV) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original EV Module Type	281x	–

### 3.2.11 External Interface (XINTF) Module

The External Interface (XINTF) module is an asynchronous bus that is used to interface to external devices and memory.

The device-specific XINTF guides are:

- [TMS320x281x External Interface \(XINTF\) Reference Guide](#)
- [TMS320x2834x External Interface \(XINTF\) Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-15](#) lists the XINTF types, including device-specific differences within each type.

**Table 3-15. External Interface (XINTF) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	External Interface with x16 Data Bus	281x	–
1	External Interface with x16 or x32 Data Bus	2823x, 2833x, 2834x	–

### 3.2.12 Hardware Built-in Self-Test (HWBIST) Module

The Hardware Built-in Self-Test (HWBIST) module is capable of testing the CPU, VCU, FPU, and TMU for defective circuitry. The library routine can be executed whenever convenient in an application to detect if the circuitry is defective or damaged, and allow the system code to manage the fault condition in a controlled manner. This module produces coverage up to 99%. The execution of this routine can be adjusted to meet performance and latency requirements within the system.

Refer to the device-specific technical reference manual for more information.

[Table 3-16](#) lists the HWBIST types, including device-specific differences within each type.

**Table 3-16. Hardware Built-in Self-Test (HWBIST) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original HWBIST Module Type	M35x, M36x, F2837xD, F2837xS	–
		F2807x, F2838xD	Coverage up to 99%
		F28002x, F28003x	Coverage up to 90%

### 3.2.13 Host Interface Controller (HIC) Module

The Host Interface Controller (HIC) module allows an external host controller (master) to directly access resources of the device (slave) by emulating the ASRAM protocol. It has two modes of operation: direct access and mailbox access. In direct access mode, device resources is written to and read from directly by the external host. In mailbox access mode, external host and device write to and read from a buffer and notify each other when the buffer write/read is complete.

Refer to the device-specific technical reference manual for more information.

[Table 3-17](#) lists the HIC types, including device-specific differences within each type.

**Table 3-17. Host Interface Controller (HIC) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original HIC Module Type	28002x	–
1	Added commit scheme for the lock bits to avoid potential security holes	28003x	–

### 3.2.14 Micro Cyclic Redundancy Check (μCRC) Module

The Micro Cyclic Redundancy Check (μCRC) module can be used to compute CRC on data and program data in specified memory locations. The μCRC supports the CRC8, CRC16-1, CRC16-2, CRC32 polynomials.

Refer to the device-specific technical reference manual for more information.

[Table 3-18](#) lists the μCRC types, including device-specific differences within each type.

**Table 3-18. Micro Cyclic Redundancy Check (μCRC) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original μCRC Module Type	M35x, M36x	–

### 3.2.15 Watchdog Module

Watchdog module can optionally trigger a reset if it is not serviced by the CPU within a user-specified amount of time.

Refer to the device-specific technical reference manual for more information

[Table 3-19](#) lists the watchdog types, including device-specific differences within each type.

**Table 3-19. Watchdog Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original watchdog module	281x, 280x, 2823x, 2833x, 2834x, 2802x, 2803x, 2806x, 2805x, M35x, M36x	–
1	Windowed watchdog	F2837xD, F2837xS, F2807x	–
2	Added prescaler	F28004x, F2838xD, F28002x, F28003x	–

### 3.2.16 NMI Watchdog Module

NMIWD module is used to handle system-level errors. If the CPU does not respond to the latched error condition, then the NMI watchdog will trigger a reset after a programmable time interval.

Refer to the device-specific technical reference manual for more information

[Table 3-20](#) lists the NMI watchdog types, including device-specific differences within each type.

**Table 3-20. NMI Watchdog Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original NMI watchdog module	2802x, 2803x, 2806x, 2805x, M35x, M36x, F2837xD, F2837xS, F2807x, F28004x, F2838xD, F28002x, F28003x	—

### 3.2.17 System Control and Interrupts

The device-specific System Control and Interrupts guides are:

- [TMS320x281x System Control and Interrupts Reference Guide](#)
- [TMS320x280x, 2801x, and 2804x System Control and Interrupts Reference Guide](#)
- [TMS320x2834x System Control and Interrupts Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

These guides include information on the following modules:

- Memory, including Flash and OTP configuration
- Code security module (CSM)
- Dual Code Security Module (DCSM)
- Clocking and low-power modes
- 32-bit CPU-Timers
- Watchdog Timer
- General-purpose inputs/outputs (GPIO)
- Peripheral frames
- Peripheral interrupt expansion (PIE)
- Low-power modes
- External Interrupts

### 3.3 Control Peripherals

The following sections describe the Control peripherals.

#### 3.3.1 Analog-to-Digital Converter (ADC) Modules

The device-specific ADC guides are:

- [TMS320x281x Analog-to-Digital Converter \(ADC\) Reference Guide](#)
- [TMS320x280x 2801x, 2804x Analog-to-Digital Converter \(ADC\) Module Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

##### 3.3.1.1 Analog-to-Digital Converter (ADC) Module

The Analog-to-Digital Converter (ADC) module samples an analog signal and converts it to a digital value for use in an application.

Refer to the device-specific technical reference manual for more information.

[Table 3-21](#) lists the ADC types, including device-specific differences within each type.

**Table 3-21. Analog-to-Digital Converter (ADC) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original ADC Module Type. Fixed reference range of 0V to 3.0V. 12-bit pipelined architecture.	281x	—
1	Added Offset Trim and Reference Select registers.	280x, 2801x, 2804x	—
2	Added Internal/External Trim registers (OTP trim).	2823x, 2833x	—
3	Fixed internal reference range from 0V to 3.3V or ratiometric external reference. 12-bit hybrid pipeline/SAR architecture.	2802x, 2803x, 2805x, 2806x, M35x, M36x	—
4	12-bit or 16-bit SAR architecture. Ratiometric external reference. Single-ended or differential inputs. Trimmed for gain, offset, and linearity.	2807x, 2837xD, 2837xS, 2838x	—
5	12-bit, single-ended mode ONLY; 16-bit, differential mode not applicable.	28002x, 28003x, 28004x	—

##### 3.3.1.2 Analog-to-Digital Converter (ADC) Wrapper Module

The Analog-to-Digital Converter (ADC) Wrapper module provides control and sequencing of the ADC.

Refer to the device-specific technical reference manual for more information.

[Table 3-22](#) lists the ADC wrapper types, including device-specific differences within each type.

**Table 3-22. Analog-to-Digital Converter (ADC) Wrapper Module Type Descriptions**

Type	Description	Devices Covered	Device-Specific Options
0	Original ADC wrapper type. Dual 8-channel sequencer architecture.	280x, 281x, 2801x, 2804x, 2823x, 2833x	—
1	Start-of conversion (SOC) x16 architecture.	2802x, 2803x, 2805x, 2806x	—
2	Modified Type 1 accessed through ACIB.	M35x, M36x	—
3	Modified Type 1. Added burst mode, integrated post-processing blocks.	2807x, 28002x, 28003x, 28004x, 2837xD, 2837xS, 2838x	—

### 3.3.2 Configurable Logic Block (CLB) Module

The Configurable Logic Block (CLB) module is a collection of blocks that can be interconnected using software to implement custom digital logic functions or enhance existing on-chip peripherals. The CLB is able to enhance existing peripherals through a set of crossbar interconnections, which provide a high level of connectivity to existing control peripherals such as enhanced pulse width modulators (ePWM), enhanced capture modules (eCAP), and enhanced quadrature encoder pulse modules (eQEP).

Refer to the device-specific technical reference manual for more information.

[Table 3-23](#) lists the CLB types, including device-specific differences within each type.

**Table 3-23. Configurable Logic Block (CLB) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
1	Original CLB module.	2807x, 2837xD, 2837xS	—
2	<ul style="list-style-type: none"> <li>- The CLB Counter module includes a prescaler, shift register/serializer mode.</li> <li>- The CLB module includes an Output Conditioning Block that can gate CLB output signals through combinational logic.</li> <li>- The CLB HLC module can generate events based on both the rising and falling edge of the EVENT signals.</li> <li>- The CLB Tiles have 32 outputs instead of 16 outputs.</li> <li>- The CLB modules can generate NMIs.</li> </ul>	28004x	—
3	<ul style="list-style-type: none"> <li>- The CLB Counter module contains a PIPELINE mode. This allows the add/sub/shift operations, which are triggered by an event, to use the value of the counter in the previous cycle.</li> <li>- The CLB HLC module has access to CLB TILE outputs delayed by one cycle.</li> </ul>	28002x, 28003x, 2838x	—

### 3.3.3 Comparator (COMP) Module

The Comparator (COMP) module is built around an analog voltage comparator with a digital output that can signal the on-chip ePWM modules when a trip condition is detected. The positive input of the comparator is sourced directly from a device pin. The negative input of the comparator is sourced by a programmable, full-scale internal reference DAC.

Refer to the device-specific technical reference manual for more information.

[Table 3-24](#) lists the COMP types, including device-specific differences within each type.

**Table 3-24. Comparator (COMP) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original Comparator module. Internal reference DAC has 10-bit resolution. Qualification stage for glitch filtering. Ramp generator logic.	2802x, 2803x, 2806x, M35x, M36x	—
1	Internal reference DAC has 6-bit resolution. Digital filter stage for glitch filtering. No ramp generator logic.	2805x	—

### 3.3.4 Comparator Subsystem (CMPSS) Module

The Comparator Subsystem (CMPSS) module consists of analog comparators and supporting components that are combined into a topology that is useful for power applications such as peak current mode control, switched-mode power, power factor correction and voltage trip monitoring. Each CMPSS module includes two analog comparators, two programmable 12-bit DACs, one ramp generator, and two digital filters. CMPSS has the ability to synchronize with PWMSYNC signals.

Refer to the device-specific technical reference manual for more information.

[Table 3-25](#) lists the CMPSS types, including device-specific differences within each type.

**Table 3-25. Comparator Subsystem (CMPSS) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original CMPSS Module Type	F2807x, F2837xD, F2837xS	–
1	Blanking capability added that helps clear and reset the existing/imminent trip conditions near ePWM boundaries. Fixed Trip vs Clear-and-reset arbitration when the RAMP generator is used.	28002x, 28004x, 2838x	–
2	CMPSS Type 1 updated with digital filter enhancement (increase in filter prescale)	28003x	–

### 3.3.5 Digital-to-Analog Converter (DAC) Module

The Buffered Digital-to-Analog Converter (DAC) module is able to output arbitrary DC voltages to the device pins.

Refer to the device-specific technical reference manual for more information.

[Table 3-26](#) lists the DAC types, including device-specific differences within each type.

**Table 3-26. Digital-to-Analog Converter (DAC) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original DAC module. 6-bit programmable range.	2805x	–
1	12-bit programmable range.	2807x, 2837xD, 2837xS, 2838x	–
2	Pull-down register on the output removed: 1x and 2x gain options added; increased load support.	28003x, 28004x	–

### 3.3.6 Enhanced Capture (eCAP) Module

The Enhanced Capture (eCAP) module is essential in systems where accurate timing of external events is important. Uses for eCAP include:

- Speed measurements of rotating machinery (for example, toothed sprockets sensed via Hall sensors)
- Elapsed time measurements between position sensor triggers
- Period and duty cycle measurements of pulse train signals
- Decoding current or voltage amplitude derived from duty cycle encoded current/voltage sensors

The eCAP guides are:

- [TMS320x280x, 2801x, 2804x Enhanced Capture \(eCAP\) Module Reference Guide](#)
- [TMS320x2834x Enhanced Capture \(eCAP\) Module Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-27](#) lists the eCAP types, including device-specific differences within each type.

**Table 3-27. Enhanced Capture (eCAP) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original eCAP Module Type	280x, 2801x	eCAP 1 SYNCIN is fed from the ePWM module. Then all other eCAP modules have their SYNCINs fed from the eCAP module numerically preceding them.
		2802x, 2803x, 2805x, 2806x, 2807x, 2823x, 2833x, 2834x, 2837xD, 2837xS, M35x, M36x	eCAP 1 SYNCIN and eCAP4 SYNCIN are fed from the ePWM module. Then eCAP 2, 3, 5, and 6 SYNCINs are fed from the eCAP modules numerically preceding them.
1	Clears event filter, modulo counter, and any pending interrupt flags. Provides a separate DMA trigger on every capture event. Critical registers are EALLOW protected. High-Resolution capture (HRCAP) capability now an extension of eCAP.	28004x	eCAP-1 to eCAP-5 are normal eCAP. eCAP-6 and eCAP-7 have HRCAP functionality enabled.
2	Sync related enhancements	28002x, 28003x	eCAP-1 to eCAP-3 are normal eCAP. eCAP-3 has HRCAP functionality enabled.
		2838x	eCAP-1 to eCAP-5 are normal eCAP. eCAP-6 and eCAP-7 have HRCAP functionality enabled.

### 3.3.7 Enhanced Pulse Width Modulator (ePWM) Module

The Enhanced Pulse Width Modulator (ePWM) module controls many of the power-related systems found in both commercial and industrial equipments. The main systems include digital motor control, switch mode power supply control, uninterruptible power supplies (UPS), and other forms of power conversion. The PWM peripheral performs a DAC function, where the duty cycle is equivalent to a DAC analog value; it is sometimes referred to as a Power DAC.

The ePWM guides are:

- [TMS320x280x, 2801x, 2804x Enhanced Pulse Width Modulator \(ePWM\) Module Reference Guide](#)
- [TMS320x2834x Enhanced Pulse Width Modulator \(ePWM\) Module Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-28](#) lists the ePWM types, including device-specific differences within each type.

**Table 3-28. Enhanced Pulse Width Modulator (ePWM) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original ePWM Module Type	280x <sup>(1)</sup> , 2801x	Time-base synchronization scheme 1: ePWM1 SYNC out is fed to eCAP1 and ePWM2. All other ePWM modules have their SYNCIN signals fed from the ePWM module numerically preceding them.
		2804x, 2809	Time-base synchronization scheme 2: Two ePWM pinouts are possible: A-channel only or 280x compatible. If the ePWM pinout is configured for A-channel only mode, ePWM1 SYNC out is fed to eCAP1, ePWM2, ePWM5, ePWM9, and ePWM13. All other ePWM modules have their SYNCIN signals fed from the ePWM module numerically preceding them. If the ePWM pinout is configured for 280x-compatible mode, synchronization scheme 1 is used.
		2823x, 2833x, 28234	Time-base synchronization scheme 3: ePWM1 SYNC out is fed to eCAP1, ePWM2, and ePWM4. All other ePWM modules have their SYNCINs fed from the ePWM module numerically preceding them.
1	Doubled deadband resolution, interrupts and ADC SOC can be generated on both CTR = 0 or CTR = PRD. Added digital compare submodule and added hooks for high-resolution period.	2802x, 2803x, 2805x, 2806x	—
2	Expanded Register set, added High-Resolution to Dead-band RED and FED, added Dead-band generator module enhancements. Added HRPWM capability to ePWMxB channels. Added enhancements to Counter Compare Module, Event Trigger Module, and Digital Compare Module. Supports Simultaneous writes to TBPRD and CMPx Registers. Added Shadow to Active Load on SYNC of TBPRD and CMP registers.	M35x, M36x	—
3	This type is not used.	—	—
4	Remapped address space for ease of use. Added Delayed Trip functionality. Dead-band Generator Module enhancements. One shot and Global reload of Registers, Trip Zone Module Enhancements, and PWM SYNC related enhancements.	2807x, 28004x, 2837xD, 2837xS	—
	Enhancements to enable independent PWM action configuration on a CBC and an OST trip event. Changes to enable it to work at the maximum SYSCLK frequency. Changes to enable a simplified SYNC scheme. Addition of DCA/BEVTs as SYNCOUT sources. One-shot syncout synchronized to one-shot global load of shadow registers. Individual HRPWM module clocked from the respective EPWMxCLK. Separate clock to HRCAL.	28002x, 28003x, 2838x	—

(1) The time-base synchronization scheme 1 is not available in the TMS320F2809 part.

### 3.3.8 Enhanced Quadrature Encoder Pulse (eQEP) Module

The Enhanced Quadrature Encoder Pulse (eQEP) module is used for direct interface with a linear or rotary incremental encoder to get position, direction, and speed information from a rotating machine for use in a high-performance motion and position-control system.

The eQEP module guides are:

- [TMS320x280x, 2801x, 2804x Enhanced Quadrature Encoder Pulse \(eQEP\) Module Reference Guide](#)
- [TMS320x2834x Enhanced Quadrature Encoder Pulse \(eQEP\) Module Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-29](#) lists the eQEP types, including device-specific differences within each type.

**Table 3-29. Enhanced Quadrature Encoder Pulse (eQEP) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original eQEP Module Type	280x, 2803x, 2805x, 2806x, 2807x, 2823x, 2833x, 2834x, 2837xD, 2837xS, M35x, M36x	—
1	Addition of QMA (QEP Mode Adapter) Block : - Error detection logic to detect illegal transitions on eQEPA and eQEPB input signals. - xCLKMOD block that looks at transitions on input signals to generate clock signal going into eQEP module. - xDIRMOD block that looks at transitions on input signals to generate direction signal going into eQEP module.	28004x	—
2	Latching Position count on ADCSOC from PWM module. Support for SinCos transducers.	28002x, 28003x, 2838x	—

### 3.3.9 High-Resolution Capture (HRCAP) Module

The High-Resolution Capture (HRCAP) module captures the width of pulses with a typical resolution of hundreds of picoseconds and performs both conventional and high-resolution delta time measurements.

Uses for the HRCAP include:

- Capacitive touch applications
- High-resolution period and duty cycle measurements of pulse train cycles
- Instantaneous speed measurements
- Instantaneous frequency measurements
- Voltage measurements across an isolation boundary
- Distance/sonar measurement and scanning

Refer to the device-specific technical reference manual for more information.

[Table 3-30](#) lists the HRCAP types, including device-specific differences within each type.

**Table 3-30. High-Resolution Capture (HRCAP) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original HRCAP Module Type	2803x, 2806x	–
1	Simplified calibration scheme: HRCAP is always functional, never offline, always running calibration on the background which drastically reduces SW overhead to calibrate. Fractional and integer are packed into 32 bits. All eCAP hardware is accessible while using HRCAP.	28004x	eCAP-1 to eCAP-5 are normal eCAP. eCAP-6 and eCAP-7 have HRCAP functionality enabled.
2	Sync related enhancements	28002x, 28003x	eCAP-3 has HRCAP functionality enabled.
		2838x	eCAP-6 and eCAP-7 have HRCAP functionality enabled.

### 3.3.10 High-Resolution Pulse Width Modulator (HRPWM) Module

The High-Resolution Pulse Width Modulator (HRPWM) module extends the time resolution capabilities of the conventionally derived digital pulse width modulator (PWM). HRPWM is typically used when PWM resolution falls below approximately 9-10 bits.

The HRPWM guides are:

- [TMS320x280x, 2801x, 2804x High-Resolution Pulse Width Modulator \(HRPWM\) Module Reference Guide](#)
- [TMS320x2834x High Resolution Pulse Width Modulator \(HRPWM\) Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-31](#) lists the HRPWM types, including device-specific differences within each type.

**Table 3-31. High-Resolution Pulse Width Modulator (HRPWM) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original HRPWM Module Type	280x, 2801x, 2804x, 2823x, 2833x, 2834x	—
1	Added high-resolution period support, added option to select high-resolution B output, added automatic micro-step conversion.	2802x, 2803x, 2806x	—
2	Added independent high-resolution control on B-channel output, added dead band control for falling and rising edge delay, added additional delay lines per ePWM module, added SYNC pulse timings.	M35x, M36x	—
3	This type is not used.	—	—
4	Remapped address space. Added global shadow-to-active reload. Added one-shot shadow-to-active reload.	2807x, 28004x, 2837xD, 2837xS	—
	Clocks to individual HRPWM modules would be hooked up to the respective ePWMs.	28002x, 28003x, 2838x	—

### 3.3.11 InstaSPIN™ Solutions

InstaSPIN™ three-phase motor solutions make designing motor control applications easier whether you have a simple application or a complex design.

#### 3.3.11.1 InstaSPIN-FOC™

InstaSPIN-FOC™ is a three-phase motor field-oriented torque control solution which can identify, tune the torque controller, and efficiently control your motor in minutes, without the use of any mechanical rotor sensors. It includes the Flux Angle Speed Torque (FAST™) estimator and additional motor control functions needed for cascaded speed and torque loops for efficient three-phase field-oriented motor control. InstaSPIN-FOC is made available in ROM with user callable APIs. The user also has the option of executing all FOC functions in user memory (FLASH or RAM), which then makes calls to the proprietary FAST estimator firmware in ROM.

The device-specific InstaSPIN-FOC documents are:

- [TMS320F28026F, TMS320F28027F InstaSPIN™-FOC Software Technical Reference Manual](#)
- [TMS320F28069F, TMS320F28068F, TMS320F28062F InstaSPIN™-FOC Software Technical Reference Manual](#)
- [TMS320F28054F, TMS320F28052F InstaSPIN-FOC™ Software Technical Reference Manual](#)
- [InstaSPIN-FOC™ and InstaSPIN-MOTION™ User's Guide](#)

#### 3.3.11.2 InstaSPIN-MOTION™

##### Note

InstaSPIN-MOTION™ is no longer recommended for new designs and will not have application support. For motion control solutions, see the latest examples released in the [MotorControl software development kit \(SDK\)](#) for C2000™ MCUs.

InstaSPIN-MOTION is the first offering from Texas Instruments to combine TI 32-bit C2000 microcontrollers with comprehensive motor-, motion-, speed-, and position-control software. InstaSPIN-MOTION delivers robust velocity and position control at the highest efficiency for motor applications that operate in various motion state transitions. InstaSPIN-MOTION is a sensorless or sensed field-oriented motor control (FOC) solution that can identify, tune, and control your motor in minutes. InstaSPIN-MOTION features the Flux Angle Speed Torque (FAST) premium software sensor and the SpinTAC™ Motion controller.

The device-specific InstaSPIN-MOTION documents are:

- [TMS320F28069M, TMS320F28068M InstaSPIN™-MOTION Software User's Guide](#)
- [TMS320F28054M, TMS320F28052M InstaSPIN-MOTION™ Software User's Guide](#)
- [InstaSPIN-FOC™ and InstaSPIN-MOTION™ User's Guide](#)

Table 3-32 lists the InstaSPIN modules, including device-specific differences within each module.

**Table 3-32. InstaSPIN™ Module Type Description**

Module	Description	Devices	Device-Specific Options
InstaSPIN-FOC	InstaSPIN-FOC ROM	28062F, 28068F, 28069F, 280040C, 280041C, 280048C, 280049C	1 or 2 motors
		28026F, 28027F, 28052F, 28054F	1 motor
InstaSPIN-MOTION	InstaSPIN-MOTION ROM	28052M, 28054M, 28068M, 28069M	—

### 3.3.12 Programmable Gain Amplifier (PGA) Module

The Programmable Gain Amplifier (PGA) module is designed to buffer and amplify small input signals into an output range that is better suited for the on-chip ADC and Comparator modules.

Refer to the device-specific technical reference manual for more information.

[Table 3-33](#) lists the PGA types, including device-specific differences within each type.

**Table 3-33. Programmable Gain Amplifier (PGA) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original PGA module	2805x	Programmable gain modes: 3x, 6x, 11x
1	Added gain mode of 24x. Supports Low-Pass Filtering. Features Hardware-based trims to reduce offset and gain errors.	28004x	Programmable gain modes: 3x, 6x, 12x, 24x

### 3.3.13 Sigma Delta Filter Module (SDFM)

The Sigma Delta Filter Module (SDFM) is a four-channel digital filter designed specifically for current measurement and resolver position decoding in motor control applications. Each input channel can receive an independent sigma-delta ( $\Sigma\Delta$ ) modulated bit stream. The bit streams are processed by four individually programmable digital decimation filters. The filter set includes a fast comparator (secondary filter) for immediate digital threshold comparisons for over-current and under-current monitoring, and zeros-crossing detection.

Refer to the device-specific technical reference manual for more information.

[Table 3-34](#) lists the SDFM types, including device-specific differences within each type.

**Table 3-34. Sigma Delta Filter (SDFM) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original SDFM Module Type	2807x, 2837xD, 2837xS	—
1	Data filter changes: - Added 16-deep x 32-bit FIFO - Wait for Sync feature - FIFO freeze feature - Type 0 saturation bug resolved - Any PWMx.SOCA/SOCB event can trigger SDSYNC event - Each filter module data acknowledge event can trigger CPU interrupt  Comparator filter changes: - Added zeros threshold comparator - All comparator events MUXed to ECAPxIN signal	28004x	—
2	- SDFM Input Qualification - SDFM Clock Control  Comparator filter changes: - Added additional lower threshold and higher threshold comparators - Digital filter to comparator events	28003x, 2838x	Supports only Mode 0

### 3.4 Communication Peripherals

The communications peripherals are described in the following sections.

#### 3.4.1 Controller Area Network (DCAN) Module

##### Note

The DCAN is not software compatible with the C28x eCAN module.

The Controller Area Network (CAN) is a serial communications protocol that efficiently supports distributed real-time control with a high level of reliability. The DCAN module is compliant with the ISO11898-1 (CAN 2.0B) protocol specification. It supports bit rates up to 1 Mbits/s, programmable FIFO, parity checking, individual identifier masks, and interrupts. This module is similar to the Arm® Cortex®-M3 DCAN module.

Refer to the device-specific technical reference manual for more information.

Table 3-35 lists the DCAN types, including device-specific differences within each type.

**Table 3-35. Controller Area Network (DCAN) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original DCAN Design. Not Software compatible with eCAN	2807x, 28002x, 28003x, 28004x, 2837xD, 2837xS, 2838x, M35x, M36x	—

#### 3.4.2 Enhanced Controller Area Network (eCAN) Module

##### Note

The eCAN module is not software compatible with the DCAN module.

The Enhanced Controller Area Network (eCAN) module supports 32 mailboxes, time stamping of messages, and is ISO11898-1 (CAN 2.0B) compliant.

The eCAN guides are:

- [TMS320x281x DSP Enhanced Controller Area Network \(eCAN\) Reference Guide](#)
- [TMS320x280x, 2801x DSP Enhanced Controller Area Network \(eCAN\) Reference Guide](#)
- [TMS320x2834x Enhanced Controller Area Network \(eCAN\) Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

Table 3-36 lists the eCAN types, including device-specific differences within each type.

**Table 3-36. Enhanced Controller Area Network (eCAN) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original eCAN Module Type	280x, 2801x, 281x, 28016	CAN module clock = SYSCLK
		2803x, 2805x, 2806x, 2823x, 2833x	CAN module clock = SYSCLK/2
		2834x	CAN module clock = SYSCLK/4

### 3.4.3 EtherCAT® Slave Controller (ESC) Module

Ethernet for Control Automation Technology (EtherCAT®) is an Ethernet-based field bus system, invented by Beckhoff Automation and is standardized in IEC 61158. All the slave nodes connected to the bus interpret, process, and modify the data addressed to them in progress, without having to buffer the frame inside the node.

The frames are directly forwarded with minimum additional delay. This real-time behavior, frame processing and forwarding requirements are implemented by the EtherCAT slave controller hardware. EtherCAT does not require software interaction for data transmission inside the slaves. EtherCAT only defines the MAC layer while the higher layer protocols and stack are implemented in software on the microcontrollers connected to the ESC.

Refer to the device-specific technical reference manual for more information.

[Table 3-37](#) lists the ESC types, including device-specific differences within each type.

**Table 3-37. EtherCAT® Slave Controller (ESC) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original ECAT Module Type	2838x	–

### 3.4.4 Ethernet Media Access Controller (EMAC) Module

The Ethernet Media Access Controller (EMAC) module conforms to the IEEE 802.3- 2002 specifications and fully supports 10BASE-T and 100BASE-TX standards. It supports data rates of 10/100Mbps, CRC error-rejection control, user-configurable interrupts, and efficient transfers using the Micro Direct Memory Access Controller.

Refer to the device-specific technical reference manual for more information.

[Table 3-38](#) lists the EMAC types, including device-specific differences within each type.

**Table 3-38. Ethernet Media Access Controller (EMAC) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original EMAC Module Type	2838x, M35x, M36x	–

### 3.4.5 Fast Serial Interface (FSI) Module

The Fast Serial Interface (FSI) module is a serial communication peripheral capable of reliable, high-speed communication across isolation devices. Galvanic isolation devices are used in situations where two different electronic circuits, which do not have common power and ground connections, must exchange information. Though isolation devices facilitate these signal communications, they can also introduce a large delay on the signal lines and add skew between the signals. The FSI is designed specifically to ensure reliable high-speed communication for system scenarios that involve communication across isolation barriers without adding components.

Refer to the device-specific technical reference manual for more information.

[Table 3-39](#) lists the FSI types, including device-specific differences with each type.

**Table 3-39. Fast Serial Interface (FSI) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original FSI Module Type	28004x	–
1	Enhanced to feed TDM_IN port on to TX port controlled by a CLB output. Added tag match notification scheme.	28002x, 2838x	–
2	Added support for connected drive architecture (hardware-based RX to TX loopback)	28003x	–

### 3.4.6 C28x Inter-Integrated Circuit (I2C) Module

The C28x Inter-Integrated Circuit (I2C) module provides an interface between one of these DSPs and devices compliant with Philips Semiconductors Inter-IC bus (I2C-bus) specification version 2.1 and connected by way of an I2C-bus. External components attached to this 2-wire serial bus can transmit/receive 1- to 8-bit data to/from the DSP through the I2C module. This guide assumes the reader is familiar with the I2C-bus specification.

The C28x I2C guides are:

- [TMS320x280x, 2801x, 2804x Inter-Integrated Circuit \(I2C\) Module Reference Guide](#)
- [TMS320x2834x Inter-Integrated Circuit \(I2C\) Module Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-40](#) lists the C28x I2C types, including device-specific differences within each type.

**Table 3-40. C28x Inter-Integrated Circuit (I2C) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original C28x I2C Module Type. Not software compatible with M3 I2C.	280x, 2801x, 2804x, 2807x, 2823x, 2833x, 2834x, 2837xD, 2837xS, M35x, M36x	16-level FIFO
		2802x, 2803x, 2805x, 2806x	4-level FIFO
1	Fixed the bug from Type-0 related to timing of XRDY transmit interrupt.	28002x, 28003x, 28004x, 2838x	16-level FIFO

### 3.4.7 M3 Inter-Integrated Circuit (I2C) Module Type Description

The M3 Inter-Integrated Circuit (I2C) module provides an interface between one of these DSPs and devices compliant with Philips Semiconductors Inter-IC bus (I2C-bus) specification version 2.1 and connected by way of an I2C-bus. External components attached to this 2-wire serial bus can transmit/receive 1- to 8-bit data to/from the DSP through the I2C module. This guide assumes the reader is familiar with the I2C-bus specification.

Refer to the device-specific technical reference manual for more information.

[Table 3-41](#) lists the M3 I2C types, including device specific differences within each type.

**Table 3-41. M3 Inter-Integrated Circuit (I2C) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original M3 I2C Module Type. Not software compatible with C28x I2C.	M35x, M36x	—

### 3.4.8 Local Interconnect Network (LIN) Module

The Local Interconnect Network (LIN) module provides a serial communications structure at a hardware and software level. It provides a low-cost solution where the bandwidth and fault tolerance of a Controller Area Network (CAN) are not required. The Type 0 LIN module is compliant to the LIN1.3 and 2.0 protocols. The Type 1 is compliant to 2.1.

Refer to the device-specific technical reference manual for more information.

[Table 3-42](#) lists the LIN types, including device-specific differences within each type.

**Table 3-42. Local Interconnect Network (LIN) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original LIN Module Type	2803x	—
1	Compliant to the LIN 2.1 protocol specifications.	28002x, 28003x, 28004x	—

### 3.4.9 Modular Controller Area Network (MCAN)

The Modular Controller Area Network (MCAN) module supports both classic CAN and CAN FD (CAN with flexible data-rate) protocols. The CAN FD feature allows higher throughput and increased payload per data frame. Classic CAN and CAN FD devices may coexist on the same network without any conflict provided that partial network transceivers, which can detect and ignore CAN FD without generating bus errors, are used by the classic CAN devices. The MCAN module is compliant to ISO 11898-1:2015.

Refer to the device-specific technical reference manual for more information.

[Table 3-43](#) lists the MCAN types, including device-specific differences within each type.

**Table 3-43. Modular Controller Area Network (MCAN) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original MCAN Module Type with 17KB MCAN RAM	2838x	–
1	8KB MCAN RAM	28003x	–

### 3.4.10 Multichannel Buffered Serial Port (McBSP) Module

The Multichannel Buffered Serial Port (McBSP) module is used to connect to E1/T1 lines, phone-quality codecs for modem applications or high-quality stereo-quality Audio DAC devices. The McBSP receive and transmit registers are supported by a 16-level FIFO. This significantly reduces the overhead for servicing this peripheral.

The McBSP guides are:

- [TMS320x281x Multichannel Buffered Serial Port \(McBSP\) Reference Guide](#)
- [TMS320x2834x Multichannel Buffered Serial Port \(McBSP\) Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-44](#) lists the McBSP types, including device-specific differences within each type.

**Table 3-44. Multichannel Buffered Serial Port (McBSP) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original McBSP Module Type	281x	–
1	Removed FIFO to allow interconnect with DMA module. Removed FIFO-related registers (MFFTX, MFFRX, MFFCT, MFFST).	2806x, 2807x, 2823x, 2833x, 2834x, 2837xD, 2837xS, 2838x, M35x, M36x	–

### 3.4.11 Power Management Bus (PMBus) Module

The Power Management Bus (PMBus) module provides an interface between the microcontroller and devices compliant with the SMI Forum PMBus Specification Part I version 1.0 and Part II version 1.1 PMBus is based on SMBus, which uses a similar physical layer to I2C.

Refer to the device-specific technical reference manual for more information.

[Table 3-45](#) lists the PMBus types, including device-specific differences with each type.

**Table 3-45. Power Management Bus (PMBus) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original PMBus Module Type	28002x, 28003x, 28004x, 2838x	—

### 3.4.12 Serial Communications Interface (SCI) Module

The Serial Communications Interface (SCI) module is a two-wire asynchronous serial port, commonly known as UART. The SCI supports a receive and transmit FIFO for reducing servicing overhead.

The SCI guides are:

- [TMS320x281x Serial Communications Interface \(SCI\) Reference Guide](#)
- [TMS320x280x, 2801x, 28044 Serial Communications Interface \(SCI\) Reference Guide](#)
- [TMS320x2834x Serial Communications Interface \(SCI\) Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-46](#) lists the SCI types, including device-specific differences within each type.

**Table 3-46. Serial Communications Interface (SCI) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original SCI Module Type	280x, 281x, 2801x, 2804x, 2807x, 28002x, 28003x, 28004x, 2823x, 2833x, 2834x, 2837xD, 2837xS, 2838x, M35x, M36x	16-level FIFO
		2802x, 2803x, 2805x, 2806x	4-level FIFO

### 3.4.13 Serial Peripheral Interface (SPI) Module

The Serial Peripheral Interface (SPI) module is a high-speed, synchronous serial I/O port that allows a serial bit stream of programmed length (one to sixteen bits) to be shifted into and out of the device at a programmable bit-transfer rate. Normally, the SPI is used for communications between the DSP controller and external peripherals or another processor. Typical applications include external I/O or peripheral expansion through devices such as shift registers, display drivers, and ADCs. Multi-device communications are supported by the master/slave operation of the SPI. The port supports a receive and transmit FIFO for reducing servicing overhead.

The SPI guides are:

- [TMS320x281x Serial Peripheral Interface \(SPI\) Reference Guide](#)
- [TMS320x280, 2801x, 2804x Serial Peripheral Interface \(SPI\) Reference Guide](#)
- [TMS320x2834x Serial Peripheral Interface \(SPI\) Reference Guide](#)

For devices not listed above, refer to the device-specific technical reference manual.

[Table 3-47](#) lists the SPI types, including device-specific differences within each type.

**Table 3-47. Serial Peripheral Interface (SPI) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original SPI Module Type	280x, 281x, 2801x, 2804x, 2823x, 2833x, 2834x, M35x, M36x	—
1	Added support for 3-wire bidirectional mode and reduced to 4-level FIFO.	2802x	No STEINV bit
		2803x, 2805x, 2806x	Added STEINV bit (inverts SPISTE signal to support digital audio receive mode with 2 SPIs).
2	Type 1 with STEINV. Added high-speed mode. Added DMA support; increased to 16-level FIFO.	2807x, 28004x, 2837xD, 2837xS	—
	Support for custom CLB interface to update RXBUF.	28002x, 28003x, 2838x	—

### 3.4.14 Synchronous Serial Interface (SSI) Module

The Synchronous Serial Interface (SSI) module is a synchronous serial I/O port that supports communication with peripheral devices that have Texas Instruments Synchronous Serial Interfaces, SPI, or Freescale serial formats. This module supports master or slave operation, programmable clock bit rates, 16-bit and 8-deep transmit and receive FIFOs, interrupts, and  $\mu$ DMA access.

Refer to the device-specific technical reference manual for more information.

[Table 3-48](#) lists the SSI types, including device-specific differences within each type.

**Table 3-48. Synchronous Serial Interface (SSI) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original SSI Module Type	2838x, M35x, M36x	—

### 3.4.15 Universal Asynchronous Receiver/Transmitter (UART) Module

The Universal Asynchronous Receiver/Transmitter (UART) module is a serial communication port that supports programmable baud-rate generation, 16/8 TX and RX FIFOs, serial-to-parallel and parallel-to-serial conversions,  $\mu$ DMA access, and interrupts.

Refer to the device-specific technical reference manual for more information.

[Table 3-49](#) lists the UART types, including device-specific differences within each type.

**Table 3-49. Universal Asynchronous Receiver/Transmitter (UART) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original UART Module Type	2838x, M35x, M36x	–

### 3.4.16 Universal Parallel Port (uPP) Module

The Universal Parallel Port (uPP) module is a high-speed parallel interface with dedicated data lines and minimal control signals. The uPP is designed to interface with high-speed ADCs, DACs, FPGAs, or other uPP devices. The supports single channel 8-bit input or output as well as 50-MHz SDR and 25-MHz DDR interface clock frequencies.

Refer to the device-specific technical reference manual for more information.

[Table 3-50](#) lists the uPP types, including device specific differences within each type.

**Table 3-50. Universal Parallel Port (uPP) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original uPP Module Type	2837xD, 2837xS	–

### 3.4.17 Universal Serial Bus (USB) Module

The Universal Serial Port (USB) module is a USB 2.0 compliant USB Controller and PHY. The USB supports full speed operation as a device and both low- and full-speed in host operating modes. TI provides drivers for the USB controller as well as a protocol stack free of charge in our [controlSUITE™](#) software package. Both the USB controller and its corresponding software package are very similar to that of the Stellaris® family of microcontrollers, so migration of USB applications between the two platforms requires minimal effort.

Refer to the device-specific technical reference manual for more information.

[Table 3-51](#) lists the USB types, including device specific differences within each type.

**Table 3-51. Universal Serial Bus (USB) Module Type Description**

Type	Description	Devices Covered	Device-Specific Options
0	Original USB Module Type	2806x <sup>(1)</sup> , 2807x, 2837xD, 2837xS	No USB-OTG support
		M35x, M36x	USB-OTG supported
	Global interrupt enable, flag and clear registers added.	2838x	No USB-OTG support

(1) Original USB module type is only available on devices with TMS320F2806xU, TMS320F2806xF, and TMS320F2806xM part numbers.

## Changes from May 20, 2020 to October 20, 2021 (from Revision N (May 2020) to Revision O (October 2021))

	Page
• Added TMS320F28003x to <a href="#">Table 1-1</a> .....	7
• Changed InstaSPIN-FOC literature number to SPRUHP4 in <a href="#">Table 2-3</a> .....	13
• Added HWBIST to <a href="#">Table 2-8</a> .....	16
• Changed Host Interface Controller (HIC) type to 1 in <a href="#">Table 2-9</a> .....	17
• Changed Background CRC-32 (BGCRC) type to 2 in <a href="#">Table 2-9</a> .....	17
• Added <a href="#">Section 2.10</a> , TMS320F28003x Peripherals.....	18
• Added HWBIST to <a href="#">Table 2-15</a> .....	24
